

## Software Implementation Consultant

Disrupting the traditional software implementation approach makes FAST unique among its competitors and sought after by Financial Services companies looking to ditch yesterday's solutions that no longer apply to today's realities.

Today's realities include delivering solutions at a pace unheard of even several years ago. While FAST's competitors still struggle with long multi-year implementation efforts, FAST routinely implements solutions in less than 10 months – sometimes as fast as 14 weeks. The FAST team realizes it is all about shortening implementation times; thereby, enhancing value to our customers and their consumers.

Our team has unique opportunities for Software Implementation Consultants. These opportunities could be focused on either business/process or technology. Experience is not as important as a desire to learn and excel with a demonstrated excellence delivering on your commitments. You will:

- Learn FAST's unique tool sets configuring complex software components with little or no coding intervention
- Develop next generation SDLC skills from both a business and/or technology perspective
- Engage customers and team members in an Agile and collaborative environment
- Solve complex business problems utilizing FAST's library of SOA components
- Hone your leadership and client skills through a succession of rapid customer engagements
- Bachelors degree in STEM discipline preferred, advanced degree a plus

To be considered send your resume in confidence to [recruit@fasttechnology.com](mailto:recruit@fasttechnology.com) and go on-line to <http://bit.ly/2rP0GdN> and complete our on-line assessment. We will only consider those having done both. FAST is conveniently located in Metropark, New Jersey, with easy access to rail, Garden State Parkway, New Jersey Turnpike and Route 287.

*FAST is an Equal Opportunity Employer*
